

EMMANUEL COLLEGE
THE BUSINESS AND COMPUTING DEPARTMENT
Philosophical Statement

It is our intent that Business and Computing education at Emmanuel College equips pupils to use entrepreneurial knowledge and skills as well as computational thinking and creativity to understand and change the world. Such can be applied in any subject or any context to enable our students to know how to wisely approach and solve the various complex problems they will face in their learning and wider lives whilst at College and beyond. Commerce and technology are constantly moving forward; e-commerce, environmental impact and ethical trading issues are terms we hear all around us. However, such terminology didn't exist even 50 years ago, and the pace of commercial and technological change is increasing. By providing a broad, ambitious curriculum we equip our students with the knowledge and skills to enable them to be wise and effective users, designers and creators of not only current businesses and technologies but also those coming. It is our intent to challenge our students to lead this ever-changing commercial and digital world with courage and integrity.
